Powerpoint presentations

- Publications et travaux -

Date de mise en ligne : Monday 28 August 2006

Description :

Some powerpoint presentations (mostly seminars)

Géologie et géo-tourisme

Powerpoint presentations corresponding to seminars. Obviously they contain more figures (photos, in particular) than the published papers. On the other hand, they are generally less "clean" than a peer-reviewed paper.

Also, please note that some of the presentations are relatively old, and reflect only what was then the state-of-the-art .

Une orogénèse subduction-collision à l'archéen : métamorphisme HP-BT à 3.2 Ga à Barberton (Afrique du Sud)

Yes, it's in French. Presented in Clermont-Ferrand (France), January 2006. A (very) [shortened version](#) of it was presented at the [Penrose](#) conference in Lander (WY), June 2006.

Essentially corresponds to the basic data for the [Nature](#) paper.

Partial melting of amphibolites and the genesis of Archaean TTG

Presented in Canada (Sudbury and Saint-Johns), February 2002. Elements of it were presented at the 2004 EGU (in Nice), 2004 AGU (in Montréal), 2004 Geocongress (in Johannesburg).

More or less reflects the content of the [AGU \(2006\)](#) paper

The Closepet granite, Dharwar craton: petrogenesis and emplacement history

Presented in Bonn (Germany), October 2002.

This is one of the latest presentation I gave on the Closepet granite (and my PhD material), and the most complete. Many elements of it were presented at various conferences from 1997 to 2001, and were published in several [papers](#).

Interactions between slab melts and mantle wedge in Archaean subductions: old and new views on TTG

Presented in Copenhagen (Denmark), October 2002.

A slightly outdated presentation, reflecting the content of the Geology (2002) paper. Compare with the amphibolite melting presentation of 2005.
